

TECHNICAL DATA SHEET

E Glass Insulation Tapes Style **DELT series** Description and Advantages

DELT series E glass tapes are a non-asbestos product, manufactured from highly texturized yarns, specially developed for high temperature applications. These tapes are produced from closely (tight) woven yarns, enabling tapes to be produced which retain a high degree of softness and flexibility. Applications include thermal and electrical insulation wrap; gasket seals etc. E glass tapes are resistant to oils, solvents and most chemicals, but direct contact with live steam should be avoided.

Ladder tape is made by removing yarns through the center of the woven tape, creating a ladder effect. These tapes are useful in the sealing of furnaces, ovens and where bolt-holes are required in fabrication.

Service Temperature	Constant Max	550 ⁰ c , E glass woven tape
Melting Temp.		800 ⁰ c
Physiologically Harmless refer MSDS		Yes
Combustibility		Non combustible
Yarn		E glass continuous filament-texturized fiber
Coating/finishes		Ladder
